Making introductions can be one of the most stressful aspects of good etiquette. A sense of confidence and knowing the correct procedures involved in various types of introductions are a must. While one usually knows to use the correct honorific titles such as Mr. Smith or Doctor Pitt to show respect when making formal introductions, one is often unsure which person should be introduced first. What are the guidelines? Or, are there rules that we could follow?

Being introduced invites you into the conversation and makes you feel like part of the group, which is why making an introduction shows your respect for your guest. Attending an event without being introduced leaves a person feeling ignored or neglected. Making introductions is particularly important in business settings as they establish a rapport, get relationships off on the right foot, and give you an aura of being confident, prepared, and in control.

The basic guideline is to introduce the most important person last. Of course, now you want to know how to judge importance. Like any other etiquette problem, it all depends on the situation. Will your introduction involve business acquaintances, friends and family, guests at a party, or perhaps more than one of each? The main rule concerning significance is the same: we just need to understand the various levels of importance.

In a business situation the person of least authority would be introduced to the person of greater authority. For example: "Mr. Smith, I would like you to meet Ms. Jones, our newest customer service representative. Ms. Jones, this is Mr. Smith, our vice president in charge of operations." While vice president of operations is an important position, if you are introducing a possible client, then your V.P. would take the lesser role as in:

"Ms. Green, this is Mr. Smith, our vice president in charge of operations. Mr. Smith, this is Ms. Green, who is considering using our firm to advertise her new line." In business (at least good business) all customers, and possible customers, outrank

At a party, the question "Who is the more important person?" can become confusing. A few basic rules can help one to wade through these murky waters. If the gathering or party is large, it is perfectly correct to introduce yourself to others present if your host(ess) is busy. Men are introduced to women. Introduce the younger person to the elder. Introduce the single woman to the married woman. Remember also to add a little general information about the people you are introducing. Types of employment or common interests are usual topics that help get conversations started. Hobbies, such as sports, music, or arts, are always good topics to break the ice.

“If you make food that tastes really good, you win,” says Josh Tetrick, with a smile. And winning is crucial, he says, with his company “Just” in the vanguard of a new sector with an ambitious mission: to use cutting-edge technologies to create food that will take down the meat and dairy industries.

The scope is huge: growing meat in labs, producing creamy scrambled “eggs” from mung beans, or making fish that has never swum in water, or cow’s milk brewed from yeast. The drive is to lessen the colossal environmental damage wrought by industrial farming, from its vast carbon emissions to water pollution and disease.

Earlier studies have shown that elephants may be monitoring ground vibrations through their bodies, a trait more commonly associated with small creatures like scorpions and insects. For example, elephants have been observed fleeing for higher ground in the moments before distant tsunamis, and a mother elephant who feels threatened will stomp on the ground to warn others away. By suggesting that elephants not only cause distinct vibrations with different activities, but can perceive the

difference from great distances, a research published on May 7, 2018 in the journal Current Biology expands the possibilities of what the animals may be communicating. It also presents a new opportunity for researchers and conservationists looking to surveil the animals at a distance, a tactic that could be useful for saving a species that is threatened by poachers.

Cape Town found itself in crisis in 2018 as the city braced for “Day Zero,” when little rainfall and low dam levels left the city with no water. However, restrictions on water usage proved effective, and the city was able to push Day Zero back to sometime in 2019 and loosen the restrictions. Unfortunately, though, the city is still not in the clear, and the city’s water supply will depend on the amount of rainfall it receives in 2019. Other challenges facing Cape Town include “a growing population, contamination of rivers, and leakage from rickety

According to one scholarly definition, something is humorous if people cognitively appreciate it if it creates “the positive emotion of amusement,” or if it produces laughter. But while an adult laughs 18 times a day, laughter isn’t a reliable indicator. Researchers found only 1% of remarks that prompted laughter to be remotely funny.

One general theory holds that we are amused when we are made to feel superior to others. Freud, for his part, suggested that forbidden things are hilarious (because humor is a pre-repressive psychic energy). Yet another approach, pioneered by Kant and Schopenhauer and popularized by Henny Youngman, sees humor as arising from incongruity: When conventions are un-

Fifth-generation wireless technology, known as 5G, could significantly decrease reliance on networking hardware and give companies quicker and easier access to applications in the cloud, according to a survey by a head of an enterprise networking community said on May 7, 2018.

"5G plays into (companies') hybrid and multi-cloud strategies," said Nick Lippis, co-founder and chairman of ONUG, a group of IT leaders that advocate for creating open networking standards. "It offers a much more streamlined way to access information and IT."

Widespread deployment of 5G, the expected next step after today's 4G LTE wireless technology, could cut corporate spending on physical infrastructure as firms connect wirelessly to cloud services, Lippis said. The technology would speed access to cloud applications and free up IT departments to focus on orchestration, application development, network monitoring and security, he said.

3D printing of food works much like 3D printing of other materials in that layers of raw materials are deposited to build up a final product. In addition to offering customized food options, the ability to print food at home or on an industrial scale could greatly reduce food waste and the costs of storage and transportation. It might also help meet the rapidly increasing food needs of the growing world population.

In a new study, the researchers used a prototype 3D printer to create food with microstructures that replicated the physical properties and nanoscale texture they observed in actual food samples. They demonstrated that their platform and optimized methods can turn carbohydrates and proteins into food with microstructures that can be tuned to control food texture and how the food is processed by the body.

HISTORIC COLLINSVILLE may be the best-kept secret in Tennessee – even though it's been open to the public for 20 years.

The off-the-beaten-path pioneer settlement, located about 15 miles south of Clarksville, first opened in 1974 to give children a hands-on experience outside of the classroom about life in the 1800s. The attraction opened to the public a few years later, recreating the past with 18 historical structures and authentic period furnishings.

The Cherokee, Chickasaw, Creek, Iroquois and Shawnee Indians once roamed these hills bordered by the Cumberland River. Later, the soldiers of the North and South met nearby. Today, Collinsville visitors can learn more about all of the land's inhabitants.

Every gigantic earthquake begins as a tiny rock failure at almost a point, followed by strong shaking radiating from a vast rupture area extending over hundreds of kilometers. Whether an earthquake is predictable and whether it produces observable signatures different from those of smaller earthquakes are the potential for earthquake early warning and probabilistic forecasting. Inspired by studies of seismic waves, and probably rupture processes, that are almost identical to those of smaller earthquakes, cross-correlation is a common feature of earthquakes in the Tohoku-Hokkaido subduction zone. A sensitivity seismograph records for approximately 100,000 events reveals 80 extremely large ($M > 4.5$) and small ($M < 4.0$) earthquakes, co-located within about 100 metres. An extreme example of large earthquakes (170 of 899 large events) separated by a long period of up to 15 years, and small earthquakes, foreshocks and aftershocks are similar. This frequently occurring similarity between large and small earthquakes cascading rupture processes in a widespread hierarchical structure along the plate interface. The predictability of the final size of the earthquake (that is, the location and a set of parameters that constrain the final size is not at all well constrained).

Directions: Read the text on biological age. Answer the question according to the text.

A small clinical study in California has suggested for the first time that it might be possible to reverse biological age. The study measures a person's biological age.

For one year, nine healthy volunteers took a cocktail of three common drugs — growth hormone, metformin, and rapamycin — which reversed 2.5 years of their biological ages, measured by analysing marks on a person's genome. The study also showed signs of rejuvenation.

The results were a surprise even to the trial organizers — but researchers caution that the study was preliminary and did not include a control arm.

“I'd expected to see slowing down of the clock, but not a reversal,” says geneticist David Sinclair at Harvard Medical School, who conducted the epigenetic analysis. “That felt kind of futuristic.” The findings were published in the journal *Nature*.

“It may be that there is an effect,” says cell biologist Wolfgang Wagner at the University of Cologne. “But the study is not solid because the study is very small and not well controlled.”

Triclosan is a chemical that can kill bacteria. Companies have put it into toothpastes, soaps, and other cleaning products for its germ-killing power. But triclosan washes down drains and into waterways. There, it can kill off good bacteria that are resistant to triclosan and other germ-killers, including lifesaving antibiotics. The U.S. Food and Drug Administration has banned triclosan — and some similar chemicals — from use in soaps. Soap alone should be enough to kill germs.

For years, scientists speculated as to why panda fur is colored the way it is. One belief was that the white fur helped them blend in with the snow, and another suggested that it helped them maintain an appropriate body temperature. In 2017, a study published in the journal *Behavioral Ecology* claimed that the camouflage helps them hide in snowy habitats while the black fur is used for camouflage and communication. The black fur around their eyes helps them identify other pandas and avoid predators.

People tend to hate computer passwords, that often nonsensical jumble of letters, numbers and symbols. The secret codes seem impossible to remember. It's why every login page has a "Forgot Password" link.

Now, a new standard is emerging for passwords, backed by a growing number of business leaders everywhere. No longer must passwords be changed so often, or include an incomprehensible mix of characters. The new standard champions less complexity in favour of length.

When Harvard scientists analyzed more than two decades of data on more than 77,000 people, they found that those with type A blood had an increased risk for heart disease compared to people with type O blood. Those with type A blood had 5 percent greater risk. Researchers aren't sure why, but posit that type A blood contains a chemical that increases risk, and that type O blood, which is associated with reduced risk, may contain a chemical that reduces risk.

Ever since humans have lived on the earth, they have made use of various forms of communication. The most common has been in the form of oral speech. When there is a language barrier, communication is often done through letters, words and ideas. Tourists and people unable to hear or speak have to resort to other means of communication. Body language is very vivid and exact and can be used internationally; spelling, however, cannot. Body language can be used intentionally or unintentionally. A nod signifies approval, while shaking the head indicates disapproval. Other forms of communication can be found in signal tags, Morse code, and picture signs.

Low- and high-context communication refers not only to individual communication strategies. Western cultures tend to gravitate toward low-context starting points, while Eastern and Southern cultures tend to gravitate toward high-context starting points. Within these huge categories, there are important differences and many variations. When communicating with someone from a high-context culture, it is important to pay specific attention to non-verbal cues and the behavior of others who may know more about the culture. In low-context communication is the norm, directness is likely to be expected in return.

In economics, inflation is a sustained increase in the prices of goods and services in an economy over a period of time. Inflation occurs when the demand for goods and services tends to be greater than the supply. In a country where almost everyone has a job, many people become too confident and spend freely and greatly increase their credit purchases, especially on an installment plan. The demand for goods of all kinds increases. What happens? Prices rise.

by primarily three things:

? Price—In a largely price-transparent world, consumers can quickly and easily compare prices online. Amazon and Shopbot aggregate pricing from various retailers.

? Convenience of the shopping experience—Consumers cite the reasons of their shift to buying online. Consider ordering and have your goods delivered to your door from the comfort of your own home.

? The range of products available online—Physical retailers displaying or carrying a full range of items, in contrast to online retailers, display any and every product they sell, and only pay for the space. Amazon, for example, has an operating cost to sell that is significantly lower than average. Furthermore, certain products are simply not available in physical stores and entertainment content available from US and other countries requires licenses.

composition: _____

distinct: _____

[735] 答案解析.

its composition of four parts 后面的破折号起了解释说明的作用，后面列举了英格兰、苏格兰、威尔士和北爱尔兰。由此可以推断 composition 的意思是“组合”的意思。

relevant: _____

preconceived: _____

[736] 答案解析.

句首的 however 表示此句想表达与上一句相反的意思。也就是说那些老套的模式化观念是不对的。前文提到，不要认为英国人都喝下午茶，而且你也不会看到街上看到戴高帽子的人。这些都是人们所持有的刻板印象。因此可推断 preconceived 意思是“预想的”。
